Clinical Hospital Stay for students of 6th Degree of Medicine at the University of Barcelona-Campus Clínic. This course, under the framework of educational cooperation between two health sciences institutions, promotes the competent and integrated application of the learning acquired during the Degree of Medicine. During the period of exercise, Dr. Fondevila established the lines of action and guidelines for the different teachers of the subject, thus promoting that the students tutored in the subject were progressively incorporated into the corresponding clinical experience.

Since 2020, Dr. Fondevila is a Lecturer and Researcher as part of the **TEODOR: Transeuropean Educational Initiative in Organ Donation and Transplantation project team**. The aim of this project is to design and test a new and innovative training program on organ donation and transplantation for relevant healthcare personnel in Latvia, the Czech Republic and Lithuania. The project is led by Pauls Stradins University Clinical Hospital (Latvia), with the collaboration and expertise of Spanish and Swedish partners. The purpose of this project is to improve the technical and non-technical competencies required in organ donation and transplantation for better clinical performance and patient outcome, and to foster the exchange of best practices between the countries, with the ultimate goal of improving donation and

transplantation activities that can save and improve the lives of hundreds and thousands of patients on donor waiting lists.
